

Mata Kuliah : Pemrograman Web Lanjut
Program Studi : D4 – Teknik Informatika
Semester : 4

Kelas : TI-2D
NIM : 244107020142
Nama : Faatihurrizki Prasojo
Jobsheet Ke- : Filament 4

Laporan Jobsheet

Praktikum

Langkah	Jawaban/Deskripsi
1	Membuat Resource Post • php artisan make:filament-resource Post <pre>PS C:\laragon\www\Filament2026> * History restored The "title attribute" is used to label each record in the UI. You can leave this blank if records do not have a title. What is the title attribute for this model? > title Would you like to generate a read-only view page for the resource? (yes/no) [no] > no Should the configuration be generated from the current database columns? (yes/no) [no] > no INFO Filament resource [App\Filament\Resources\Posts\PostResource] created successfully. PS C:\laragon\www\Filament2026></pre> Refresh browser maka akan muncul menu Posts 

	Laravel Dashboard Categories Posts Users Posts > Create Create Post CreateCreate & create anotherCancel
2	Implementasi Form Elements - Modifikasi file PostForm.php <pre>1 <?php 2 3 namespace App\Filament\Resources\Posts\Schemas; 4 5 use Filament\Schemas\Schema; 6 use Filament\Forms\Components\TextInput; 7 use Filament\Tables\Columns\TextInputColumn; 8 9 class PostForm 10 { 11 public static function configure(Schema \$schema): Schema 12 { 13 return \$schema 14 ->components([15 // 16 TextInput::make("title"), 17 TextInput::make("slug"), 18]); 19 } 20 } 21</pre> - Jalankan browser Laravel Dashboard Categories Posts Users Posts > Create Create Post TitleSlug CreateCreate & create anotherCancel - Select (Relasi Category) Gunakan relasi yang sudah dibuat:

```
namespace App\Filament\Resources\Posts\Schemas;

use Filament\Schemas\Schema;
use Filament\Forms\Components\TextInput;
use Filament\Forms\Components\TextInputColumn;
use Filament\Forms\Components\Select;

class PostForm
{
    public static function configure(Schema $schema): Schema
    {
        return $schema
            ->components([
                //
                TextInput::make("title"),
                TextInput::make("slug"),
                Select::make('category_id')
                    ->relationship('Category', "name")
                    ->preload()
                    ->searchable(),
            ]);
    }
}
```

Menampilkan Data di Tabel

- Modifikasi file PostTable.php

```
use Filament\Tables\Table;
use Filament\Tables\Columns\TextColumn;
use Filament\Tables\Columns\ColorColumn;
use Filament\Tables\Columns\ImageColumn;

class PostsTable
{
    public static function configure(Table $table):
    {
        return $table
            ->columns([
                TextColumn::make("title"),
                TextColumn::make("slug"),
                TextColumn::make("category.name"),
                ColorColumn::make("color"),
                ImageColumn::make("image")
                    ->disk("public"),
            ])
            ->filters([
                //
            ])
            ->recordActions([
                EditAction::make(),
            ])
            ->toolbarActions([
                BulkActionGroup::make([
                    DeleteBulkAction::make(),
                ]),
            ]),
    }
}
```

Soal Praktikum

Langkah	Jawaban/Deskripsi
1	Mengapa kita perlu storage:link? Agar file yang diunggah (yang berada di folder privat storage/app/public) bisa diakses oleh browser melalui folder publik (public/storage).
2	Apa fungsi \$casts untuk field JSON? Untuk mengubah data JSON string di database menjadi array PHP secara otomatis saat kita memanggilnya di kode, sehingga mudah diolah (misalnya untuk checkbox list).
3	Mengapa kita menggunakan category.name bukan category_id? Agar pengguna lebih mudah membaca nama kategori di tabel, bukan sekadar melihat angka ID yang tidak memiliki arti visual bagi user.
4	Apa perbedaan RichEditor dan MarkdownEditor? RichEditor menghasilkan output berupa format HTML (seperti tag , <p>), sedangkan MarkdownEditor menghasilkan output dalam sintaks Markdown (seperti **teks** , # Heading).

Soal Praktikum

Langkah	Jawaban/Deskripsi
1	<pre>// 2. Tambah kolom Published dengan ikon boolean IconColumn::make('published') ->label('Published') ->boolean() ->trueIcon('heroicon-o-check-circle') ->>falseIcon('heroicon-o-x-circle') ->trueColor('success') ->>falseColor('danger'), // Kolom tanggal publish TextColumn::make('published_at') ->label('Published At') ->dateTime('d M Y') ->sortable() ->toggleable(),])</pre>
